

# Lithium battery energy storage industry background

## Overview

---

Since their first commercialization in the early 1990s, the use of LIBs has spread from consumer electronics to electric vehicle and stationary energy storage applications. Energy storage batteries are manufactured devices that accept, store, and discharge electrical. Lithium-ion batteries (LIBs) are a critical part of daily life. 6 billion by 2035, at a CAGR of 15. 8% market share, while cathode will lead the component segment with a 36.
