

Lithium battery pack protection system

Overview

A battery protection unit (BPU) prevents possible damage to the battery cells and the failure of the battery, enhancing the useful operating life of lithium-ion batteries by protecting the battery pack against charge current, discharge current, and pack short fault conditions. We understand performance and safety are major care-about for battery packs with lithium-based (li-ion and li-polymer) chemistries. However, the unstable behavior of lithium-ion cells under critical conditions requires them to be handled. Safety and ageing concerns in Lithium battery applications highlight the critical need for advanced protection and control solutions in the market. Adoption of electric vehicles, both in the automotive and e-mobility sectors, is driving the demand for high-performance lithium battery solutions.

Lithium battery pack protection system

Lithium - Ion Battery Protection System

Battery pack contains the Lithium-ion cells that power the EV drivetrain and together with that, a sensible decision referred to as the EV Battery Management System BMS.
