

Longi photovoltaic panel load-bearing capacity

Overview

This design increases the maximum load-bearing capacity by more than 50%, while it reduces the potential risk of deformation at the center by 50%, without cell microcracks, claimed LONGi. The module can endure front and rear side static mechanical loading of up to 3,600 Pa and. The Hi-MO X10 Light design Module is based on HPBC 2.0 cell, maintaining excellent performance in safety, reliability, and high-efficiency, with a maximum efficiency of 24.8% and a maximum power of 560W. 2KG/□, a reduction of over 30% compared to conventional modules. The new Hi-MO X10 Light Design Module, launched on August 15, is based. According to the company, this module has been developed targeting low-load-bearing commercial and Industrial (C&I) roofs. HIBC (Hybrid Interdigitated Back-Contact) refers to a high-low temperature composite passivated back contact technology. 3 kilograms, making it particularly.
