

# Mauritius containerized power generation

## Overview

---

Mauritius is transitioning to a low carbon economy, with the Central Electricity Board (CEB) installing the first grid-scale Battery Energy Storage System (BESS). This is the first of its kind in Mauritius and enables high capacity storage of renewable energy in the grid. Industrial zones, shipping terminals, and commercial hubs require 24/7 power reliability to sustain operations. 56 MW, powered by a mix of public and private generation: For the financial year ended 30 June 2024, the total energy generated amounted to 3,325.03 GWh) was produced by the CEB from 4 thermal power stations. Why Port Louis is Becoming Africa's Energy Storage Hotspot when you think of Mauritius, you imagine pristine beaches and sugarcane fields, not grid-scale battery. With its expertise, strategic location, and robust renewable energy policies, Mauritius is poised to become a key player in the African. Distributed energy station refers to a clean and environmentally friendly power generation facility with low power (tens of kilowatts to tens of megawatts), small and modular, and distributed near the load.
