

# Norwegian container energy storage battery technology

## Overview

---

NES, specializing in sustainable energy design and smart control systems for vessels, will deliver a containerized energy storage system that includes a “Quest” battery charger, a 1 MW battery package, and a control system. If Simon Møkster Shipping is to succeed in cutting its fleet's greenhouse gas (GHG) emissions by 40% and carbon intensity by 70% by 2030, and ultimately, net zero by 2050, charterers, crew, digitalisation, batteries and shore power will all have big roles to play. Like other Norwegian shipowners. We develop battery modules, racks and energy storage systems designed to power industrial applications across challenging sectors, including construction, maritime, defence, and grid systems. At Nordic Batteries we focus on what is important: safety, reliability and performance. Under the contract, HAV Group's subsidiary will provide a. The Norwegian Maritime Authority (NMA) hereby invites comments on the draft Regulations on ships using battery systems with lithium-ion cells with a total capacity of 20 kWh or more. This consultation document will also be published on our website [www.](http://www.) Comments to the proposal must be.
