

Outdoor base station survey specification requirements

Overview

NOAA's National Geodetic Survey (NGS) invites organizations and individuals to share data from their permanent GPS base stations by including these stations in the National CORS network. Each CORS must meet the specifications described in the CORS Guidelines (pdf) -. Survey specifications describe the methods and procedures needed to attain a desired survey accuracy standard. The FGCS standards and specifications have. rming accurate surveys with a Survey Grade GPS system. If geospatial software is available on a personal. In reviewing these Survey Standards and the supporting Engineering Manuals, the ultimate objective of a given survey task is the timely delivery of data, information that satisfies the requirements of the Scope of Work (SOW) and that the work products are complete, consistent, accurate, and. se of conventional surveying techniques (total station) to establish Vegetated Vertical Acc. The guidelines in this section are based upon several sources of information as well as practical experience.
