

Outdoor power supply operating temperature

Overview

While most outdoor power supplies struggle below -20°C , advanced engineering can extend operational ranges to -40°C or lower. Extreme environments can be determined by: The standard operating temperature range for a power supply is -40°C to $+85^{\circ}\text{C}$ range. High heat above $+85^{\circ}\text{C}$ and freezing environments below -40°C can. Safety standards dictate the requirements for products to remain safe during the normal operating condition of the product as well as during an abnormal single fault condition. TC provides stable power under such harsh conditions.
