

# Outdoor solar power hub that can be used on trains

## Overview

---

☐☐ Switzerland has launched the world's first removable railway photovoltaic system to integrate solar panels into train tracks. ☐☐ The system, developed by Swiss startup Sun-Ways, features a patented attachment design allowing panels to be easily removed for rail maintenance. The panels can collect solar power, even with trains using the railway throughout the day. Sunways, a photovoltaic inverter manufacturer, is piloting a new solar project on active. Solar powered trains use photovoltaic (PV) panels to convert sunlight into electricity. There are two main types: Some models combine both approaches.

## Outdoor solar power hub that can be used on trains

### Switzerland tests innovative solar panels on train tracks

Switzerland is taking a groundbreaking step in renewable energy by launching what is touted as the world's first removable solar power plant designed for installation on active railway tracks.
