

Phase change energy storage and batteries

Overview

These systems use materials that absorb/release heat during phase transitions (think solid-to-liquid), offering a clever solution to renewable energy's "I only work when the sun shines" problem [10]. In the Journal of Applied Physics, researchers from Lawrence Berkeley National Laboratory, Georgia Institute of Technology, and the University of California.

Phase change energy storage and batteries

Phase Change Materials for Renewable Energy Storage at ...

Thermal energy storage technologies utilizing phase change materials (PCMs) that melt in the intermediate temperature range, between 100 and 220 °C, have the potential to mitigate the ...
