

Photovoltaic energy storage new energy plummets

Overview

The Sudden Drop in Energy Storage Development: What's Happening?

In Q1 2025, global energy storage project planning activity plummeted by 40% compared to 2024 forecasts—a staggering reversal for an industry projected to grow at 12% annually. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest. — The U. Even as the Trump administration rolled out a series of anti-clean energy policies, solar and storage still accounted for 82% of all new power added to the grid in its first six months. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects. System integrator Fluence saw revenue of US\$475.
