

# Photovoltaic energy storage power supply 5 4 applicable

## Overview

---

This measure is an extension of nonresidential photovoltaic (PV) system and battery storage system requirements currently in the 2022 Energy Code. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. The Renewable Energy Ready Home (RERH) specifications were developed by the U.S. It can also generate electricity on cloudy and rainy days from reflected sunlight. The World Bank through Scaling Up Renewable Energy for Low-Income Countries (SREP) and the Small Island Developing States (SIDSDOCK) provided funding to the PPA as the Project Implementation Agency for the SEIDP.

### Solar Photovoltaic: SPECIFICATION,

## CHECKLIST AND GUIDE

About the Renewable Energy Ready Home Specifications Assumptions of the RERH Solar Photovoltaic Specification Builder and Specification Limitations

- 1.5 Document the solar resource potential at the designated array location
- 3.3 Install a conduit for the AC wire run from the designated inverter location to the electric service panel
- 4.2 Record the name and Web address of the electric utility service provider
- 5.1 Landscape Plan
- 5.2 Placement of non-array roof penetrations and structural building elements

Appendix A: RERH Labeling Guidance

These specifications were created with certain assumptions about the house and the proposed solar energy system. They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system.
