

Photovoltaic flexible bracket complementary

Overview

It provides a good complement to traditional structures in special places such as roads, farms, sewage treatment plants and fish ponds. Flexible photovoltaic brackets have been proposed to replace traditional beam-supported photovoltaic modules. The flexible photovoltaic support structure system in the existing photovoltaic array generally adopts double-cable support (without additional cables and space trusses) and three-cable support, and resists the structure's own weight and wind and snow work by applying prestress to the double cables. Flexible support has a very wide range of application scenarios, similar to sewage treatment plants, agricultural light complementary, fishing light complementary, mountain photovoltaic, and parking lot photovoltaic, etc. It combines the needs of animal husbandry (such as cattle and sheep farming) and photovoltaic power generation. Flexible photovoltaic brackets have several advantages, including large span, multiple spans, resistance to wind-induced vibration, prevention of hidden cracks in the brackets and components, adaptability to complex terrain, increased photovoltaic power station capacity, space release under the. As an important part of photovoltaic power generation system, flexible photovoltaic bracket has been paid wide attention in recent years because of its adaptability and high efficiency in complex environment.

Photovoltaic flexible bracket complementary

WO2023134035A1

The present application relates to the technical field of photovoltaic brackets, and discloses a flexible photovoltaic bracket and a photovoltaic array.
