

Photovoltaic panel bee turns its head

Overview

But to bees, these panels look like something else: big, shiny puddles of water. Imagine you're a bee; you've been working tirelessly for hours. What happens when a bee finds a solar panel In a world that is in continuous demand for clean and renewable energy, there is something beyond that that no one in America thought of, and it is called solar beekeeping. Perhaps it sounds a little confusing, because how are bees and solar panels. ize usage of land allocat-ed for solar projects. The co-location of solar and agriculture offers opportunities for conservation, food production, in-creasing pollinator habitat, and adding additional farm reve-nue str tice of placing beehives on or near solar sites.
