Photovoltaic panel controller floating charge voltage

Overview

Battery Floating Charging Voltage – This voltage keeps the battery at full charge and stops it from losing power on its own. For a 12V system, this is usually 13. I have a graph of the input voltage values of this module. On this graph, I can see the bulk stage and later the. Solar charge controllers put batteries through 4 charging stages: What are the 4 Solar Battery Charging Stages?

For lead-acid batteries, the initial bulk charging stage delivers the maximum allowable current into the solar battery to bring it up to a state of charge of approximately 80 to 90%.
