

Photovoltaic panel glass misalignment

**European
Warehouse**

 **7-15 days**
Delivery

ONE-STOP SOLUTION

65kWh 30kW

130kWh 30kW

130kWh 60kW

Overview

To help stakeholders mitigate the threat of premature field failures, this article looks at the market, technology, and testing trends that appear to contribute to a rise in reports of solar glass breakage. Solar modules are getting bigger, thinner, and more powerful. But from Texas to Thailand, the same problem is appearing: broken glass. In a feature article for PV Tech Power (Q3 2025), David Devir, principal engineer for VDE Americas, looks at the origins of today's supersized PV module glass problem and considers. We have seen cases of the glass in solar panels (photovoltaic [PV] modules) breaking differently, and more often, than it did 5 years ago. With the trend towards double glass sided modules as seen in Bifacials, or TOPCon with double glass sided. PV manufacturers are now using much thinner glass to cover the front (and sometimes back) of solar panels.

Tough Break: Many Factors Make Glass Breakage More Likely

Several changes have increased the risk of glass breakage. But there is probably no single change that is responsible for the problem. Here, we summarize our observations and thoughts on PV glass ...

Meeting the Challenge of PV Module Glass Cracks

PV manufacturers are now using much thinner glass to cover the front (and sometimes back) of solar panels. The newer thinner glass is just 2.5 mm or even thinner and fractures more ...
