

Photovoltaic panel lightning protection test report

Overview

This report first gathers general information about photovoltaic installations lightning protection measures and then describes lightning experts' recommendations for different specific installations. Lightning protection level for which it is designed. Four classes of LPS (I, II, III and IV) are defined as a set of c I. Table 10 presents the recommended standards related to PV systems including PV. IEC (EN) 62305-2 states procedures and data for the calculation of the risk resulting from lightning strikes into structures and for the choice of lightning protection systems. Actually, the technical guidelines for installation suggest protecting with SPD's (surge protective device) both the DC. This Technical Report is proposed by Task 3 experts of the PVPS programme involved in "Use of Photovoltaic Power Systems in stand-alone and island applications" It is a part of a study funded by the French Agency for Environment and Energy management (ADEME): "Protection guide against the effects. This report consists of 12 pages, including annexes, and cannot be reproduced in part without a written permission.

Photovoltaic panel lightning protection test report

Microsoft Word

The aim of this paper is to estimate voltages due to lightning discharges and to determine the effective need of lightning protection measures on the basis of the risk analysis and the protection costs.
