

# Photovoltaic panels are covered with snow

## Overview

---

Solar panels in winter still produce electricity when they are covered in snow as long as they receive sunlight. So in a way, the snow-covered solar panels in winter. Solar panels, technically known as photovoltaic (PV) systems, are engineered to convert sunlight directly into electricity. A study published in Science Direct showed that when the panels are too warm, they can. This article will discuss what happens to a PV system's electrical output under snowy conditions and how snow on solar panels affects its performance, and how snow should be treated during the design process to ensure systems are reliable year-round. This phenomenon is particularly relevant for homeowners and businesses in regions that experience winter weather, as it can affect energy production and efficiency.
