

# Photovoltaic solar panel lead wire

## Overview

---

For solar panel leads, the most suitable wire consists of stranded copper, specifically with a gauge of 10-12, and UL certification. Using undersized wire in your solar installation can result in dangerous overheating, significant energy losses from voltage drop, and costly equipment failures. The wire (or conductors) listed below includes standard PV wire to connect the leads from the solar panels, or USE-2 or THHN conductors rated for home-run lengths from your array combiner box to your. Solar wires and cables are specialized electrical conductors designed specifically for photovoltaic (PV) systems. They are the means by which energy is transferred in the system, so knowing how they work is vital. if you're unfamiliar with the terms, this guide is for you.
