

Photovoltaic solar power generation promotion

Overview

This study provides an insight into how to promote residential solar PV's long-term development and contributes to provide implications for policy-makers in the enforcement of green electricity. Currently, human society are facing a common challenge of reducing carbon. Therefore, this paper constructs a three-party evolutionary game model in a social network with the government, investment companies and residents as the main subjects and examines the influence of different subjects' behavioral strategies on the promotion of DPV under the social learning. China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. 28. Average price of solar modules, expressed in US dollars per watt, adjusted for inflation. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) - Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. Larger solar cells are grouped in PV panels, and PV panels are connected in arrays that can produce electricity for an. Abstract: In the process of modern economic development, the solar photovoltaic power generation is constantly improving and promoting the steady growth of our national economy.

Photovoltaic solar power generation promotion

Photovoltaics , Department of Energy

The Solar office supports development of low-cost, high-efficiency photovoltaic (PV) technologies to make solar power more accessible.
