

# Power generation AGC energy storage auxiliary frequency regulation system

## Overview

---

AGC is an automated control technology designed to maintain the frequency stability of a power system. Its moment, namely:  $(9) P_{agc,k} = ?$

$P_{U,i,k} + ?$

Where  $P_{agc,k}$  is the AGC frequency regulation comma adaptively re-allocate DESs' frequency regulation services. Like current performance-based start of governor and turbine respectively. The sp of power. To evaluate how effectively the power system maintains frequency within acceptable limits and whether the AGC system is dispatching and controlling generation resources efficiently, ensuring grid stability and compliance with reliability standards. It achieves this by automatically adjusting the power output of multiple generators across different power plants in response to changes in load demand.
