

Power grid management system

Overview

Advanced Distribution Management Systems (ADMS) and Distributed Energy Resource Management Systems (DERMS) are crucial grid management technologies in today's modern power delivery system. ADMS integrates multiple utility operational systems into a unified control platform. SEL ES provides expertise for designing microgrid control systems (MCSs) and power management solutions. Transform the distribution power grid through advanced automation, network model management, outage management and distributed energy resource integration. It transforms real-time data into actionable insights that drive grid reliability, resilience, and efficiency, even in the most severe weather conditions.

Power grid management system

Sustainable Grid Solutions

Emerson's Sustainable Grid Solutions transform unpredictable renewable, distributed energy into predictable, reliable power using real-time demand forecasting, operational visibility and analytics ...
