

Reduced carbon emissions brussels

Overview

The Brussels government has officially adopted its Air, Climate and Energy Plan. The climate action plan aims to make Brussels carbon neutral by 2050, reduce greenhouse gas emissions by 47 per cent by 2030, compared to 2005 levels, and fight energy poverty. This means staying on this course is vital. In 2023, Belgium accounted for 3.5 % of the EU's net greenhouse gas (GHG) emissions and reduced its net emissions by 29. Also. In 2021, The Real Urban Emissions (TRUE) Initiative published a report on the state of real-world vehicle emissions in the BCR, demonstrating the potential benefits of the Brussels Low Emission Zone (LEZ) for reducing pollutant emissions. The remaining 5% would be compensated by negative emissions, which include both LULUCF-based and engineered removals, such. The emissions-cutting legislation offers a weaker target than initially planned, responding to government pushback on new green policies. | Filip Singer/EFE via EPA This article is also available in: French.
