

Senegal Telecommunications solar Base Station New Infrastructure

Overview

Work on a solar energy and battery storage project in Senegal, touted to be the biggest in West Africa once it goes live, is set to begin next month after an EPC (Engineering, Procurement and Construction) contract for its development was recently signed. High-profile projects like the Blaise Diagne International Airport (AIBD), Dakar Regional Express Train (TER), and energy initiatives such as the Greater Tortue Ahmeyin (GTA) gas project and solar developments are reshaping the nation's economic landscape. The Kolda project will encompass a 60MWp PV. The government's ASER300 project is bringing electricity to 300 villages all around the country with mini-grids, which include PV modules, inverters, batteries, and cooling systems. Drought, arid and saline soil, lack of rainfall, forest dieback – Senegal is feeling the full impact of climate. Voltalia, an international company specialising in renewable energies, will provide all the photovoltaic infrastructure required for the project. With an electricity access rate of 84% and a target of universal access by this year, the country is investing in renewable energy, modern gas. Renewable energy investments in Senegal are primarily concentrated on solar, wind, and biomass projects, with the government targeting a 30% share of renewables in the national energy mix by 2025. Key developments include the Taiba N'Diaye Wind Farm and various solar initiatives, supported by.
