

Sheep farm uses solar power to generate electricity

Overview

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy — and offers high incomes in the process. That is more than 75% of the area of Manhattan. Solar advocates in the state have dreamed of transforming derelict coal mines into solar power plants since 2011, if not before, with little to show for it. Lara, who studied animal science at Universidade de São.

Behind America's Largest Solar Grazing Agreement

Enel's award-winning solar grazing agreement puts 13,000+ sheep managing vegetation on solar farms, embracing agrivoltaics at industrial scale.
