

Singapore data center uses 600mm deep smart energy storage cabinets

Overview

Sustainable Metal Cloud's data centre, where computers are cooled via liquid immersion, at ST Telemedia Global Data Centres' facility in Loyang. Singapore aims to expand its data centre capacity by more than one-third to satisfy rising computing needs, as more businesses digitalise and more. In a move that stunned industry observers, Singapore announced on May 30 that it would release more data center capacity to the tune of 300MW, a substantial figure and a new policy direction for the nation-state. Singapore had long held the position of a data center hub in Southeast Asia. However, the standard, SS 715:2025, Energy Efficiency of Data Centre IT Equipment, is aimed at helping operators, consultants and end-users achieve significant energy savings while supporting the nation's long-term sustainability goals. These facilities are optimized for scale, energy management, and environmental efficiency. Singapore's data usage. Singapore has in place the Singapore Green Plan 2030 2, a whole-of-nation effort to build a sustainable future, with the goal of achieving net-zero emissions by the year 2050.
