

Solar inverter outputs three-phase electricity

Overview

The 3 phase solar inverter is a device that converts the direct current (DC) generated by solar panel into 3 phase alternating current (AC). Its output voltage is generally 380 volts. Essentially, instead of outputting a single AC waveform, it outputs three waveforms, each 120 degrees out of phase. Transform your home's solar energy system with a 3-phase solar inverter, the powerhouse technology that's revolutionizing how we harness the sun's power. However, they can be more expensive and require more complex installation.
