

Solar photovoltaic panels installed on rooftops to generate electricity

Overview

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power. Solar panels are built to work in all climates, but in some cases, rooftops may not be suitable for solar systems due to age or tree cover. Choosing the appropriate solar technology, 3.

Solar photovoltaic panels installed on rooftops to generate electricity

Solar Rooftops Explained: How They Work and Why They Matter

What Is a Solar Rooftop System? A solar rooftop system is a set of solar panels installed on the roof of a building--be it a home, office, factory, or school--that captures sunlight and converts it into electricity.
