

Solar photovoltaic power generation and self-use electricity

Overview

Within the sector, solar photovoltaic (PV) technology is particularly well suited for this purpose, as panels installed on rooftops can directly supply households, businesses, farms and factories. The power generated from these individual units can then be sold or self-consumed. However, the. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation.

Solar energy

Since solar cells obviously cannot produce electric power in the dark, part of the energy they develop under light is stored, in many applications, for use when light is not available.
