

Solar power generation sun shed with air conditioning

Overview

This comprehensive guide explains how to choose and size a solar generator to run your air conditioner, so you can beat the heat off-grid, reduce utility bills, or ensure emergency backup that keeps you cool. You must REGISTER before you can post. I have a 10'x12' shed, with a glass door and two windows, and 194 sqft of roof at a 2/12 slant (it's a bit bigger than the size of the shed). I want to run air conditioning in there (min-split like this), as well as a few screens, wifi router, my computer. Clean up those wires and protect them from the sun. We have a Senville 12000 BTU heat pump conditioning an 8x8 shed which contains all the solar electrical gear, and it is powered 100% off solar except overnight of course. Figure you'll need closer to 600W of panels to do this, and even then I'm not sure it would always keep up. It's a power-hungry appliance with a secret weapon that can bring lesser solar systems to their knees. This is my definitive, no-nonsense guide to taming that beast.
