

Solar power station next to the high-speed rail

Overview

California High-Speed Rail Authority has announced that the train will rely on a dedicated solar power infrastructure. Around 552 acres of solar panels are projected to supply the necessary 44 MW to power the train, which will also need batteries with a storage. California's long-promised high-speed rail project has officially gotten underway, with features that should have everyone excited for the future. As the world shifts toward renewable energy sources, California is poised to launch the first solar-powered. Transportation California is building a clean, green high-speed rail system that will be powered by 100% solar energy. The system will include a new utility-scale solar farm with 445 acres of solar panels that will generate 44 megawatts of electricity.
