

# Solar power storage growth rate

## Overview

---

Over the past year, US solar-generated electricity grew 37% while battery storage expanded by 64% as 55. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest. Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to EIA data reviewed by the SUN DAY Campaign, continuing their strong 2025 growth. EIA's latest monthly "Electric Power Monthly" report (with data through Novem), once again. Wind and solar investments in the first half of 2025 fell 18%, to nearly US\$35 billion (prior to the enactment of this act), compared to the same period in 2024. energy storage market set a record for quarterly growth in Q2 2025, with 5.

### EIA: 99%+ of new US capacity in 2026 will be solar, wind + storage

In addition, EIA does not project any new nuclear power growth in the coming year. Thus, in 2026, renewables and

battery storage will account for 99.2% of net new capacity - and even ...
