

# Solar power with grid backup in albania

## Overview

---

Beyond simply generating solar power, Albania's strategy incorporates battery energy storage systems (BESS) to enhance grid reliability. These systems are crucial for managing the intermittent nature of solar energy. Their total planned capacity is just under 10. The country, which has historically relied almost exclusively on hydropower for electricity, is vulnerable to the impacts of droughts. It is the overarching goal of the EUKI to foster climate cooperation within the European Union (EU) in order to mitigate greenhouse gas emissions. The installed. The country is now entering a new phase — one that includes solar, wind, and international partnerships aimed at building long-term energy security.
