

# Solar support pet protective film

## Overview

---

Polyester films for solar cells are used to make backsheets that protect the back side of solar modules. The two main types are SW00L and SW30G. The weather-proof PET film, SG00L with triple structure, can be used to substitute fluorine film as the outer material for the. We are the leading supplier of PET film used in the construction of halogen free back sheet material with over 50GW of installed capacity worldwide relying of the unique set of properties delivered by the Mylar ® UVHPET™ range of products. The Mylar ® UVHPET™ range is the result of over 60 years'. If you make photovoltaic (PV) cells and solar modules for garden lighting, camping and domestic power supplies, and right up to large commercial arrays, the materials you use impact the products' reliability, lifespan, and—ultimately—your reputation as a manufacturer, in a big way. That's why it's. Polyethylene Terephthalate (PET) is a versatile thermoplastic polymer widely used in various industries due to its excellent properties. PET plastic resin is known for its strength, flexibility, and chemical resistance, making it an ideal material for many applications, including solar panels.

## Solar support pet protective film

---

### Photovoltaic Applications , Mitsubishi Polyester Film, Inc. Americas

Polyester films can be used in a variety of constructions that are either mounted on the back of photovoltaic solar modules (crystalline) or used as a part of the construction for coated flexible photovoltaic solar modules ...

## **The Role of PET Film in Solar Panels and Green Technologies**

PET Film (polyester film), as an outstanding packaging and electronic material, plays a non-negligible role in

- ✓ 50KW/100KWH
- ✓ HIGHER POWER OUTPUT IN OFF-GRID MODE
- ✓ CONVENIENT OPERATION & MAINTENANCE
- ✓ PRE-WIRED

solar panels and green technologies. This article will explore in detail the application of PET Film in solar ...

[Learn More](#)

## Photovoltaic Backsheet Film for Solar Panels

Our PET film is at the forefront of solar technology, offering unmatched durability, electrical insulation, and environmental resistance, ensuring your solar panels operate at peak efficiency for years to come.
