

# Super capacitor discharge

## Overview

---

A supercapacitor (SC), also called an ultracapacitor, is a high-capacity, with a value much higher than solid-state capacitors but with lower limits. It bridges the gap between and . It typically stores 10 to 100 times more or than electrolytic capacitors, can accept and deliver charge much faster than batteries, and tolerates many more

## Super capacitor discharge

---

### How to Quickly and Safely Charge Supercapacitors

Also, there is no series sense resistor creating an undesirable voltage drop, especially during discharge. This application note provides a design for charging supercaps using either dedicated supercap chargers or ...

---

### Supercapacitor application guidelines

When the charge voltage is removed, and the capacitor is not loaded, this additional current will discharge the supercapacitor and is referred to as the self discharge current.

## Super capacitor discharge

## calculator

This calculator determines timekeeping operation using a supercapacitor based upon starting and ending capacitor voltages, discharge current, and capacitor size.

## Supercapacitor Leakage Current and Self Discharge Characteristics

Leakage current is a charge maintaining current while the supercapacitor is on charge. In order to calculate required backup time over system operating temperature range, designers need to take a look at self ...

## How to Use Supercapacitors? A Brief Guide to the Design-In ...

Compared to other capacitor technologies, EDLCs (Electric Double Layer Capacitor) are outstanding for

their very high charge storage capacity and very low equivalent series resistance (ESR).

## Supercapacitor Discharge Calculator

0.450 V Recommended decoupling capacitor: 2250  $\mu$ F  
Constant current discharge: 1d 19h 31m 18s  
Constant resistance discharge: 2d 12h 20m 2s

[Learn More](#)

LiFePO<sub>4</sub> Battery, safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life: > 6000

Warranty: 10 years

## Supercapacitor Technical Guide

Self-discharge is the rate of voltage decline when the capacitor is not connected to any circuit. The rate of self-discharge is dependent on the state of charge it was held out before being disconnected from the circuit.
