

The PV Inverter Scandal

Overview

experts found undocumented communication modules and secret radios embedded in some Chinese-manufactured solar inverters and battery systems. While they are designed for remote updates, U. utilities typically install firewalls to prevent unauthorized access. government analysis of Chinese-made inverters has found “no definitive evidence” of malicious wireless functions. Power inverters convert the direct current produced by solar panels and wind turbines into the alternating current used by the grid. They're also embedded in home batteries, electric vehicle chargers, and even heat pumps. Because they often require remote updates and maintenance, inverters are. The European Solar Manufacturing Council (ESMC), which represents the interests of European manufacturers described the report of hidden devices as “very concerning” and the association has urged the European Commission to develop and deploy a “toolbox” for inverter security. Reuters' revelation. In May of 2025, U. Not listed in product documentation, these shadow components create hidden backdoors that can circumvent utility firewalls and allow. U.
