

# The current status and prospects of energy storage system development

## Overview

---

This paper systematically reviews the basic principles and research progress of current mainstream energy-storage technologies, providing an in-depth analysis of the characteristics and differences of various technologies. The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this report to provide the most comprehensive, timely analysis of energy storage in the US. Renewable energy storage solutions increase system productivity and capture the unpredictable renewable energy supply, enabling quick and simple modifications to the electric infrastructure.
