

# The first micro-film of State Grid

## Overview

---

The first microphotographs were produced by John Benjamin Dancer in 1839, using a camera with a microscope lens attached and a daguerreotype plate. The images had a 160x reduction (2). Microphotography paved the way for the development of microfilm. In addition to filming from. It is a small-scale power system with distributed energy resources. To realize the distributed generation potential, adopting a system where the associated loads and generation are considered as a subsystem or a microgrid is essential. Microfilm State Grid: Revolutionizing Energy Distribution or Just Another Tech Buzzword?

Have you ever wondered how we'll power smart cities when 68% of the world's population will live in urban areas by 2050?

Enter Microfilm State Grid - the energy distribution solution making waves in the. The history of microfilming begins in the early 19th century, marking the start of a technological revolution in document preservation that would transform how libraries and archives manage their collections for generations.

## The first micro-film of State Grid

---

### State Grid New Year Microfilm

Microfilm faced significant competition when National Cash Register (NCR) marketed Carl O. Carlson's microfiche reader in 1961. This storage system placed more than 100 pages on one four-by-six-inch ...
