

# The newly used photovoltaic panels are white

## Overview

---

Yes, solar panels can be white. For decades architects have been asking for a way to customize the color of solar elements to make them blend into a building's. Scientists have recently developed the first white solar panel, which will enable them to enter a new era of photovoltaic technology. The novel technological solution produces electrical power and provides architectural advantages beyond basic solar cell capabilities. The second is because white reflects the heat from sunlight, keeping buildings cooler and reducing their energy demands. Available in two unique finishes, specifically designed for high-quality façade applications.

### White Solar Panels - A Cool Idea?

What it means is the world's first white solar panels with no visible cells or connections. The Swiss company behind the technology, CSEM, claims that today's blue/black silicon solar power panels ...
