

# The photovoltaic panels don't look old why is there no power

## Overview

---

After about 25 years, the panels may still generate electricity, but they do so at a reduced capacity. This decline in performance is due to natural solar panel degradation, which occurs over time as the materials inside the panels are exposed to weather and sunlight. Thanks to improvements in solar technology along with tax credits and incentives, the best solar panels have never been more affordable. So much so that you may be contemplating adding solar power to your home. With the popularity of solar increasing, you've probably heard or read some things about. The notion that solar panels are inherently unattractive is a misconception that this blog aims to dispel. Most solar panels experience 0. They are the mechanism from which sunlight is converted into energy. When they were installed they had a nice black look to them.
