

The solar inverter keeps restarting

Overview

Why it happens: Outdated firmware, internal relay failure, or damaged control boards can prevent a reboot. It's common with inverters that haven't been updated in years. Solution: Run a manual reset first. If your inverter keeps switching on and off then you might start wondering if it is because of some damage. Sometimes it shuts down for minutes, sometimes for hours, and sometimes it flashes error codes that disappear before you can. My inverter has restarted whilst i have been using my computer. In this article, we'll break down the most common solar inverter problems, explain how to detect them, and provide practical troubleshooting and maintenance tips.
