

Uninterruptible power supply is an emergency power supply

Overview

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. It conditions incoming power to ensure clean and. An uninterruptible power supply is something you might not think about until you really need it. MF3d / Getty Images It's a foundational element of device integrity, but you wouldn't be the first person to beg the question, "What is a UPS?"

" In short, a UPS safeguards electronic devices from power. An emergency generator can be defined as a stationary device, driven by a reciprocating internal combustion engine or turbine that serves solely as a secondary source of mechanical or electrical power whenever the primary energy supply is disrupted or discontinued.

Uninterruptible power supply is an emergency power supply

Uninterruptible power supply

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.
