

Vienna europe renewable energy

Overview

The city is replacing imported fossil fuels with a renewable heating mix based on large and small-scale heat pumps, waste-heat recovery, deep and shallow geothermal sources, and sustainable biomass. Dense urban areas will rely mainly on district heating, powered increasingly by. The Municipal Department 20 - Energy Planning (German) is committed to making the energy supply in our city fit for the future and to advance the energy transition. More than 80% of Austria's electricity generation are already coming from renewable sources. Vienna is building the heating system of the future, one that is climate-neutral, socially fair, and resilient by design. From sustainable urban planning, through geothermal engineering to blockchain technology, Vienna is contributing new ideas and sustainable solutions for.

Vienna europe renewable energy
