

# Wastewater treatment plant solar power generation project

## Overview

---

A new solar canopy installed at a wastewater treatment plant in City of Pendleton, Oregon, cools the facility and generates power. It's estimated that the solar canopy can generate 325,000 kWh of electricity annually, offsetting significant energy costs. In CA, using Government Code 4217 a public entity can procure a solar system from a sole source. - Avoid possible loss of available incentives. However, many people do not recognize the energy burden these facilities create, which can be more than 30% of a municipality's energy bill. What Are Wastewater Plants Facing?

Transitioning to a solar-powered. Solar energy utilization in wastewater treatment dates back to the early 20th century, when pioneers first explored its potential for water heating.
