

# What are the drainage holes of photovoltaic panels

## Overview

---

Each SOL panel comes fully equipped with 14 number of drainage holes designed to continually evacuate water from the panels to dramatically reduce risks of shortage, corrosion and rust. What is the round hole under the solar panel?

The round hole under a solar panel serves multiple significant purposes, primarily concerning the drainage of moisture, access for wiring, and enhanced airflow. Moisture management is crucial; this hole allows any accumulated water to escape, thus. Among the many means, using solar panel water drain clips is a straightforward but effective approach that contributes to the operational efficiency and longevity of solar panels. This negatively affects the efficiency of the entire PV system. The drainage clip works most efficiently when two drainage service life of solar panels. The component is a photovoltaic water guide and mud drain device.

## Photovoltaic panel drainage hole

The accumulation of dirt in the panels edge or in the corners, reduces photovoltaic panel power generation, and will form hot spots effect, reducing

the service life of panels.
