

# What does 1000v mean on a solar panel

## Overview

---

The core voltage rating of a 1000 VDC solar panel indicates the maximum direct current voltage it can safely operate at under ideal conditions. This threshold is determined by: Manufacturers list this value clearly on panel datasheets. Solar panels usually max out between 30V-60V per panel, depending on size and design. Cold weather increases voltage, hot weather lowers it. If you measure the size ( area) it possible to estimate.
