

What s the matter with the abnormal noise of the generator blades

Overview

Mechanical wear, dirt buildup, and lubricant deterioration increase vibrations and noise over time. Aging exhaust systems and changing load patterns can lead to louder operation. It's normal for a generator to produce noise, but a generator producing loud, strange operational noises isn't normal. While appearing compact in design, the interior components. Before delving into the causes of a loud or rough-sounding generator, it's essential to distinguish between what is considered normal and what's a sign of trouble. Generators produce some noise when running, and this can vary depending on the type of fuel, the engine's size, and the specific model. - Noise Characteristics: Rattling or clanking sounds. Knocking or banging: This typically indicates a loose or damaged system component.
