

# What to do if the photovoltaic panel is connected but has no power

## Overview

---

A faulty inverter or charge controller are the most likely reasons for a solar panel to register no voltage. Other possible reasons for low to zero power are a damaged PV module, poor wiring, shading and temperature higher than the ideal operating range. If a solar panel exhibits no power output, there are several critical steps to undertake. If your solar array does not produce any. Are your solar panels not working properly?

Is your inverter giving a warning light on its display?

There must be a technical issue with your system while producing and delivering the desired amount of power. Troubleshooting basic issues is something that every homeowner should be aware of. Whether you're searching.
