

Where are the solar power plants in Cambodia

Overview

Just two solar power plants are up and running in Cambodia at present, one a 10-MW plant developed by Singapore's Sunseap and another, 60-MW facility in Kampong Speu. Cambodia generates solar-powered energy from 3 solar power plants across the country. How much electricity is generated from solar farms each year?

According to the latest data from the International Energy Agency (IEA), the global. Today, Cambodia's domestic energy mix is largely dominated by hydropower and coal, which respectively account for 46% and 48% of supply. Meanwhile, solar arrays in the sun-drenched kingdom currently provide just about 5% of the country's electricity. The country plans to significantly scale up capacity in the coming decades to strengthen the energy grid and reach its net-zero emissions goals. This Cambodia solar power project is a significant milestone in the nation's pursuit of renewable energy, supporting its strategic goal to diversify the energy mix and. Twenty-six bidders submitted proposals to develop a 60 megawatt (MW) solar power project to state-owned Electricite du Cambodge (EDC) in September. The average bid price set a record low for Southeast Asia, which should persuade neighboring governments to embrace auctions, according to the Asian.
