

# Which country has the best quality photovoltaic panels

## Overview

---

As of recent reports, China, Germany, the United States, and Japan are among the top producers of high-quality solar panels, with China leading both in production capacity and market share. The country dominates the. For a 2025 snapshot, this page uses the latest fully consolidated year of PV module production (2024) and treats it as the best proxy for the 2025 manufacturing landscape. In the latest consolidated data, global PV module production reached 726 GW and manufacturing capacity reached 1,405 GW/year. Though, looking through the Snapshot of Global PV Markets report from the International Energy Agency's Photovoltaic Power Systems Program (IEA PVPS), a few other charts stood out to me at least as much as the ones showing China's dominance — and China's not even close to the top of those. Solar has massive potential to transform life on our planet. These leaders are transforming their energy landscapes while influencing global climate policy, market dynamics, and technological innovation.
