

# Which is Better Factory-Installed Energy Storage or solar

## Overview

---

This article will explain the real difference between a battery and a storage system and decide when to use each, with verified data on the global ESS growth and the technologies that shape solar integration. In fact, according to research from Lawrence Berkeley National Laboratory (LBNL), through 2019, 70% of all behind-the-meter storage is paired with solar. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. The growing world of renewable energy sources commonly confuses between Battery vs Energy Storage System (ESS). This article walks through the key differences to help you find a system that fits your real life, not just your. This project explored factory-installed solar plus storage (FISS)<sup>1</sup> to overcome first cost and installation barriers and bring this resiliency solution to scale for single-family affordable and market-rate homebuyers. This battery system is paired with a residential.
